

Deliverable 1 — Requirements Table

Campus Placement & Internship Pipeline • Requirements Engineering & UML Use-Case Modelling

Name	SRN	Course	Problem Statement
Aaditya Shankar Chandan	PES1UG24CS003	Software Engineering - Lab 1	Problem Statement #03 Campus & Academic Operations

Scenario: The campus placement cell manages hundreds of corporate drives with varying eligibility criteria. The platform must parse student resumes, apply multi-tier CGPA and backlog filters, manage multi-round interview queues, and process offer letters.

Req ID	Type	Description (“The system shall ...”)	Priority	Acceptance Criteria (measurable pass/fail)	Rationale	Comments (peer critique → revision)
FR-001	Functional	The system shall parse an uploaded student resume (PDF, up to 5 MB), extract skill tags onto the student profile, and evaluate the profile against the eligibility rule set of every active drive, recording a per-tier verdict with a discrepancy reason.	High	PASS: for a student holding an active backlog, every drive requiring zero backlogs is marked Ineligible with reason ACTIVE_BACKLOG, and the extracted skill tags appear on the profile within 30 seconds of upload. FAIL: a student with an active backlog is shown as Eligible for a zero-backlog drive, or a resume is accepted with no skill tags extracted.	Eligibility screening is the gate for every later stage of the pipeline; an applicant who slips past a backlog rule consumes a recruiter’s interview slot and costs the cell credibility with the company.	Peer: "Does 'filtered out' mean the drive disappears?" -> reworded: ineligible drives stay visible with the failing tier named, so a student can contest a stale record. (Given requirement, refined.)
FR-002	Functional	The system shall allow a Placement Officer to publish a corporate drive specifying an application window, a round structure, and a multi-tier eligibility rule set covering minimum CGPA, maximum active backlogs, permitted branches and a prior-offer cap.	High	PASS: a published drive refuses an application from a student who violates any single tier, and the refusal names the tier violated. FAIL: a drive can be published with no CGPA tier and no backlog tier set, or a student violating one tier can still apply.	Every company sets its own thresholds; encoding them once at publish time is what makes the automated screening in FR-001 possible instead of a manual spreadsheet pass.	Peer: "What about a company with no branch restriction?" -> the branch list defaults to 'all programmes' rather than being a mandatory field.
FR-003	Functional	The system shall allow a Student Applicant to apply to any drive for which they are marked Eligible at any time before the application window closes, and shall refuse the application once the window has closed or the student's prior-offer cap is reached.	High	PASS: an application submitted 1 minute before the window closes is accepted and appears in the recruiter's applicant list; one submitted 1 minute after is refused with reason WINDOW_CLOSED, and a student already at the cap is refused with reason OFFER_CAP_REACHED. FAIL: a late application is accepted, or an eligible in-window application is refused.	The application window is contractual with the visiting company; accepting a late application forces the cell to reconcile the shortlist by hand after it has been sent.	Peer: "Two different refusals are bundled into one requirement." -> kept as one requirement because both are window/quota gates on the same action, but each now has its own reason code in the criteria.
FR-004	Functional	The system shall allow a Company Recruiter to mark every applicant in a closing interview round as Advanced, Rejected or On Hold, and shall place advanced applicants in the queue for the next round while preserving each applicant's round history.	High	PASS: once round N is closed every applicant carries exactly one outcome, advanced applicants appear in round N+1's queue, and rejected applicants appear in no later queue. FAIL: an applicant appears in two round queues at once, a rejected applicant reaches round N+1, or a round closes with an applicant left unmarked.	A drive runs three to five rounds across several days; without one authoritative queue the cell reconciles rounds over email and students receive contradictory call letters.	Peer: "'On Hold' is ambiguous - held until when?" -> On Hold applicants stay in round N's pool and may be advanced until the drive is closed, then lapse to Rejected.
FR-005	Functional	The system shall allow a Placement Officer to release an offer letter to a selected applicant recording company, role, CTC and acceptance deadline, and shall increment the student's accepted-offer count when the student accepts.	High	PASS: on release the student is notified and the letter is downloadable; on acceptance the offer count increments and every drive above the student's prior-offer cap turns Ineligible. FAIL: an offer is released with no acceptance deadline, or an accepted offer leaves the student's eligibility for further drives unchanged.	The offer is the terminal event of the pipeline and the input to the one-offer policy that FR-003 enforces, so it must feed straight back into eligibility.	Peer: "Who is allowed to see the CTC?" -> visibility limited to the student and the placement cell; the confidentiality obligation is carried by NFR-001.
NFR-001	Nonfunctional - Performance & Security	The system shall store all student academic records and offer documents encrypted at rest with AES-256, and shall serve an authenticated document download in under 3 seconds while the platform is under peak drive-season load.	High	PASS: a raw read of the database files and object store yields no plaintext CGPA, resume text or offer content, and under a simulated peak of 500 concurrent users 95% of authenticated downloads complete in under 3 s. FAIL: any plaintext record is recoverable from the storage media, or the 95th-percentile download exceeds 3 s.	Academic records and offer terms are personal data the university is accountable for, and drive season concentrates nearly all traffic into a few days, so the encryption must not be paid for in latency.	Peer: "The given criterion only says 'benchmarking tests confirm' - confirm what number?" -> pinned to 500 concurrent users and a 3 s 95th-percentile target. (Given requirement, refined.)
NFR-002	Nonfunctional - Auditability	The system shall write every eligibility verdict, round outcome and offer release to an append-only audit log capturing the actor, the rule or decision applied and a UTC timestamp, retain entries for 3 years, and expose no interface that edits or deletes them.	High	PASS: for any applicant the full chain from resume upload to final outcome can be reconstructed from the log alone, and an attempt to modify or delete an entry through the application returns HTTP 403 and is itself logged. FAIL: any decision has no log entry, or an existing entry can be altered through the application.	Placement outcomes are routinely contested by students and by companies; without an immutable trail the cell cannot show that a multi-tier rule was applied consistently across hundreds of drives.	Peer: "Where does 3 years come from?" -> matched to the university's grievance-redressal window for a graduating batch.

FR-001 and NFR-001 are the requirements supplied with the problem statement; FR-002–FR-005 and NFR-002 are student-authored. The Comments column records the peer-critique round (Lab step 3) and the revision each comment produced.

Actors and Use Cases extracted from the approved requirements

Actor	Classification	Goal in the system
Student Applicant	Primary	Uploads a resume, applies to eligible drives, attends rounds and responds to offers.
Placement Officer	Primary	Publishes drives with their eligibility rule sets and releases offer letters.
Company Recruiter	Primary (external organisation)	Reviews the applicant queue and records the outcome of each interview round.
Academic Records System	Secondary (external system)	Supplies the authoritative CGPA and active-backlog figures used for eligibility checks.

UC ID	Use Case	Actor / relationship	Traces to
UC-01	Upload & Parse Resume	Student Applicant	FR-001, NFR-001
UC-02	Apply to Drive	Student Applicant	FR-003
UC-03	Publish Corporate Drive	Placement Officer	FR-002
UC-04	Release Offer Letter	Placement Officer	FR-005
UC-05	Conduct Interview Round	Company Recruiter	FR-004
UC-06	Verify Eligibility	Academic Records System; (included by UC-01, UC-02)	FR-001, FR-002, NFR-002
UC-07	Request Eligibility Waiver	(extends UC-02)	FR-001, FR-003
UC-08	Generate Offer Document	(included by UC-04)	FR-005, NFR-001
UC-09	Reschedule Interview Slot	(extends UC-05)	FR-004
UC-10	Record Round Outcome	(included by UC-05)	FR-004, NFR-002

Stereotype	From	To	Why
«include»	UC-01	UC-06	parsing a resume always screens it against every active drive
«include»	UC-02	UC-06	every application is re-screened against that drive's rule set
«include»	UC-04	UC-08	releasing an offer always generates the offer document
«include»	UC-05	UC-10	closing a round always records an outcome for every applicant
«extend»	UC-07	UC-02	condition: an eligibility tier was failed on stale record data
«extend»	UC-09	UC-05	condition: applicant requests a different interview slot
